

THE PLAN

An 800 Square Meter Extension to your
Vulcan Community
Health Centre!

In 30 months we
want to have the
ribbon cutting!

More Space for everyone!

Everyone was in agreement - there needs to be more space. The plan is to re-assign the space that the existing clinic occupies after the move to the new expansion. Here are some of the highlights:

1. **Home Care, Public Health and Chronic Disease Management** will move into the existing Medical Clinic space.
2. **Laboratory** is currently not meeting the space requirements for accreditation. The expansion will bring it up to and surpass the current code making it a much more functional space for equipment and staff
3. **Palliative Care Room** will move to a quieter spot in the hospital, giving families their privacy. There will be a kitchenette and comfy couches allowing more comfort for family and friends during their difficult journey together.
4. **Rehabilitation Services** will move from the basement of the hospital to a larger, brighter and more functional space, accessible from both inside and outside the building.
5. **Mental Health** and the Psychiatrist will have their own rooms. This will provide needed privacy and a brighter, pleasant room to work in. The clinicians could expand their programs to include group therapy, art and music therapy.
6. Twice a week, the **Adult Day Support Program** gives family or caregivers a short break from the constant care of special needs, disabled or chronic care patients. Currently, this is run in the basement. Moving it upstairs will provide improved access and the windows and natural light will promote a feeling of well-being.
7. **Medication Room, Pharmacy, Emergency Medication Room** - All three of these rooms will be expanded and secure for patient and staff safety.
8. **Patient Lounge** in Long Term Care needs enlarging to efficiently handle special events, family gatherings and memorials.
9. The **Doctors' Clinic** will be brought up-to-date and more accessible for everyone. There is room for up to 8 doctors with a larger waiting lounge and examination rooms to accommodate handicapped and bariatric equipment. Your **Medical Home Team** members will have an ultramodern and functional space to meet everyone's needs.
10. **Administration** is currently working in small, scattered spaces throughout the hospital. Having everyone in a central location will assist with communication and provide a more efficient hospital operation.
